What You'll Learn

For front-end developers serious about the integration of company branding with modern technologies, the Front-End Bootcamp teaches you how to realize your brand using Liferay.

The package begins with an introduction to Liferay and fundamental concepts relevant to the front-end developer: display and design of content and the bigger picture of the kind of digital experience Liferay can create.

Next, you'll use Liferay's Theme Generator to generate and deploy Themes quickly with Yeoman and Gulp.

After that, the package dives into Liferay's latest UI frameworks, exploring the rich component library of Clay, the implementation of Liferay's experience language.

Continuing to work with the Liferay Theme Generator, you'll learn how to customize themes, create reusable code fragments, and embed your themes with resources and apps.

Make sure you're giving your users consistent content experiences with templates and find out how to control the presentation of content and applications so that marketers can edit content quickly while maintaining design integrity.

The course wraps up with an overview of Single Page Applications, how to build React and Angular applications, and a discussion of front-end development best practices.

Liferay makes software that helps companies create digital experiences on web, mobile and connected devices. Our platform is open source, which makes it more reliable, innovative and secure. We try to leave a positive mark on the world through business and technology. Companies such as Adidas, Carrefour, Cisco Systems, Danone, Fujitsu, Lufthansa Flight Training, Siemens, Société Générale and the United Nations use Liferay. Visit us at www.liferay.com.
